Behind the Curtain: What Regulators Should Know About Asbestos Laboratories

Lee Poye Presents to the Texas Department of State Health Services Asbestos Program

The TDSHS Asbestos Program Staff invited Lee Poye to give a presentation detailing current analytical methods used for the determination of asbestos in air, building materials, soils, and vermiculite. Various methods were compared and the pros and cons of each were discussed. The three hour presentation provided the perfect platform for a productive Q&A session. The TDSHS Asbestos Program staff has requested public comments on the existing regulations pending the release of updates to the Texas Asbestos Health Protection Rules (TAHPR).
